

Flex IT Managed DNS

Today's businesses cannot operate without the internet. To make the internet usable in the mainstream, sites need labels that people can remember and manipulate. But computers work in numbers. That's where DNS steps in.

DNS stands for Domain Name Services. It is a system of converting IP addresses (numbers) and web addresses (labels). DNS information is owned by authorised individuals and advertised on the internet for every computer to access freely.

Flex IT Managed DNS - by Safenames

DNS appears a simple idea but requires expertise to manage correctly. Poor setup can leave your organisation's internet services unreachable, apparently broken, or vulnerable to misuse or attack by criminals. To ensure your DNS is configured and operating correctly, your business needs Flex Managed DNS, partnering with Safenames.

Key benefits include:

- **Global Reach:** Our geographically distributed DNS network spans across multiple locations,
- **Enhanced Security:** Protect your domain from potential threats and unauthorized access with our DNSSEC support, offering an extra layer of security.
- **Instant Updates:** Changes to your DNS records take effect quickly across our network, reducing propagation time and ensuring immediate results.
- **Customizable TTL:** Set Time-to-Live values to control DNS caching and improve performance according to your specific requirements.

Flex IT Managed DNS - Charges

Licenses are charged on a per-domain basis.

The subscription term is 12 months.
