Flex IT Password Manager (PaM)

The Greatest Risk of Breach can be Isolated to the Most Basic of Security Concepts, the "Password"

It is well-documented that passwords pose the greatest security risk to organizations today. 81% of data breaches can be traced to weak, default or stolen passwords. Data breaches can be very costly and result in escalating response costs, lost productivity, regulatory fines and tarnished brand.

Following standard advice and keeping track of so many unique passwords becomes an unmanageable burden - no wonder so many people take short-cuts and compromise their account security.

Flex IT PaM - Keeper Enterprise

PaM provides an accessible, secure and manageable solution to account security and access. An online vault, with personal and shared account information, is available via a browser plugin or app on any computing device. Make password management simple throughout your organisation.

Keeper provides cost savings to customers by reducing help desk calls and increasing employee productivity. Employee passwords are encrypted and stored within Keeper so employees no longer need to remember them. Keeper auto-fills login credentials across mobile applications and browsers, which greatly improves productivity. If an employee forgets their master password, Keeper allows employees to set a security question so the master password can be recovered without IT assistance.

Key features:

- Encrypted vault for each employee
- Autofill passwords into websites and apps
- Enhanced protection with two-factor authentication
- Secure file storage and sharing
- Password generator
- Cloud-based, OS and device independent
- Admin console with reporting, auditing and analytics

Flex PaM Benefits

- Ease-of-use - the vault is accessible on all internet-connected devices
- Prevent password-related data breaches and cyberthreats
- Strengthens compliance
- Boost employee productivity
- Enforce password policies and procedures
- Reduce help desk costs
- Minimal training, fast time-to-security
- Improve employee security awareness and behaviour
